

CD or Flash Drive Software Installation

Preliminary Steps

- Make sure you have **enough disk space** available to install. A minimum of 500 megabytes is recommended.
- **Close down your Banyon Data software and any other programs before installing.**

Installation Steps

- Insert the Banyon Data CD into the CD-ROM (Drive) or insert the flashdrive into the USB port. Wait and the Setup will should start automatically.

If not:

- Click the Windows **Start** Menu, located on your windows task bar.
- Click on the **Run** Menu option.
- Enter in the **Open** text box "**<drive letter>:\setup.exe**"
- Then click the **OK** button (Your chosen drive may NOT be shown as D. It could be E or F as well or another letter or name if loading from another computer's USB drive or CD ROM device).
- Click **OK** and use the default destination folder. (If installing to a network drive, see the "**READ ME**" manual on installing to a Network Drive).

Then when the setup program is loaded:

- Follow the instructions on the Setup Screen. Finally, the Setup program may ask you to restart your computer.

Notes:

New Installation Setup Requirements

Software	First time installation of Banyon Software on new PC requires software CD/USB. Application downloads from Banyon web page alone will not work.
Station	Windows 10 OS. Screen Resolution Minimum: 1280 x 1024. Peripheral devices (POS Printer, Barcode Scanner, Cash Drawer, Meter Device) are USB connected. Banyon Software is installed at each station under C:\BDSWIN folder. Give user full Admin right to install Banyon software updates.
Server	Windows 10 compatible. 100GB free disk space minimum. Use to house shared data. No SQL service required. Data Location: \\<server name>\BDSWIN. Backups: \\<server name>\BDSWIN\BACKUP\<application name>. Allow user read/write access to \\<server name>\BDSWIN and subfolders.
Networking	Direct cable connection. Do NOT use WiFi connection. Peer-to-peer connection where dedicated server is not used. Use UNC path for Banyon data connections. Do NOT use mapped network drive. Full user access ready. No user authentication pop-up.
Internet Access	Microsoft Edge/Internet Explorer recommended. Create Windows Firewall exceptions for winscp.exe and ftp.exe in \SysWow64 and \System32 for both in- and outbound traffic. Allow user download/upload access from/to ftp.banyon.com
Microsoft Office	MS Office 365 32-bit version. Install: www.banyon.com/downloads/DisableLeasing.exe
Antivirus	Any. Create exceptions for \BDSWIN folders at stations and server. Create exceptions for ftp.exe.

Whitelist in your antivirus software Banyon Data execute files *.accdb or *.mdb

Website: <https://jackboxgames.happyfox.com/kb/article/28-how-to-whitelist-and-resolve-issues-in-antivirus-software-and-firewalls/>

How do I whitelist a program in Norton? **Allow Internet access for a blocked program**

1. Start Norton.
2. In the Norton main window, click Settings.
3. In the Settings window, click Firewall.
4. On the Program Control tab, select the program that you want to allow access to the Internet.
5. In the Access drop-down list for the program entry, click Allow.
6. Click Apply.
